It’s no surprise that since its certification in 2002, our HTF7000 turbofan engine has reached the “million hours of service” milestone. After all, the fleet of more than 600 engines doesn’t spend a lot of time on the ground.

The HTF7000 is a member of the Honeywell engine family that leads the industry in dispatchability. And its highly reliable operation is matched only by its ease of maintenance—key LRUs can be replaced in 30 minutes or less with minimal tools.

For those wanting a balance of performance and value, nothing beats the HTF7000 for propulsion efficiency and technologies that reduce weight, improve fuel economy and reduce emissions.

The HTF7000 provides business jet operators:

- Industry-leading fuel efficiency
- World-class reliability
- Reduced noise signature
- Low cost of maintenance
- Worldwide product support

Platforms
- Bombardier Challenger 300
- Gulfstream G280
- Embraer Legacy 450
- Embraer Legacy 500
